The Rejections

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(e) of this title before the invention thereof by the applicant for patent.

Claim 1 is rejected under 35 U.S.C. 102(a and e) as being clearly anticipated by Nakajima et al.

The Nakajima et al reference teaches a method of crystallizing semiconductor material. On a substrate an amorphous layer is deposited by standard methods. A metal is then placed in contact with the amorphous layer. The metal promotes crystallization at lower temperatures. A laser or heat source is started at the place where the metal and the amorphous material are in contact to create a temperature gradient. The laser is then moved across the layer to crystallize the amorphous material by temperature gradients. note entire reference.
